Earlier this week, we learned that 57 vials of Moderna vaccine were removed from a pharmacy refrigerator at Aurora Medical Center – Grafton overnight, resulting in more than 500 doses of vaccine being discarded. We immediately launched an internal review and were led to believe this was caused by inadvertent human error. The individual in question today acknowledged that they intentionally removed the vaccine from refrigeration. We have notified appropriate authorities for further investigation. We continue to believe that vaccination is our way out of the pandemic. We are more than disappointed that this individual's actions will result in a delay of more than 500 people receiving their vaccine. This was a violation of our core values, and the individual is no longer employed by us.
