MADISON, Wis. – The Wisconsin Department of Natural Resources (DNR) today announced Gov. Tony Evers proclaimed June as Invasive Species Action Month to encourage Wisconsinites to help prevent the introduction and spread of invasive species that harm Wisconsin's native wildlife, wetlands, forests, prairies, lakes and rivers.

Invasive species are non-indigenous species, such as non-native plants, animals or pathogens, whose introduction causes or is likely to cause economic or environmental harm or harm to human health.

Humans move organisms around all the time, often without realizing it. When a non-native species is introduced to a new location, the species can take over and spread rapidly and widely throughout the area. When this happens, the spread can cause significant damage to the native ecosystem.

Some non-native species pose a direct threat to human or livestock health by either direct contact or ingestion. More information about the impacts of invasive species is [available on the DNR website.](#)

In his proclamation, Gov. Evers recognizes the [environmental and economic damages caused by invasives plants and animals throughout the state.](#)

“Millions of dollars, both public and private, are spent each year on the control of invasive plant and animal species in Wisconsin's waters, wild lands, agricultural lands, and urban areas,” Gov. Evers said.

Invasive species can succeed because they often leave their predators and competitors behind in their native ecosystems. Without these natural checks and balances, they can reproduce rapidly and out-compete native species.

In response, the DNR is working with citizens and partners to slow the spread of invasive species through educational outreach, strategic planning and active management.

Information on how individuals and organizations can report, prevent and help control the spread of invasive species is available on the [DNR's Invasive Species webpage](#).
